***Reasons for Allowance***

Claims 1-19 allowed.

The following is an examiner's statement of reasons for allowance: claims 1-19 are considered allowable since when reading the claims in light of the specification, as per MPEP § 2111.01, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims.

None of the references of record alone or in combination disclose or suggest the combination of limitations of retrieving a user preference profile (as supported at Page(P) 11, Line(L) 22 - P 12, L 5), applying at least one first rule to the incoming data item and adding the incoming data item to a preexisting collection (as supported at P 8, L 4-6) of one or more data items if the incoming data item follows the first rules (as supported at P 6, L 10-21), calculating statistics regarding the data items in the preexisting collection (as supported at P 7, L 5-7), applying one or more second rules to the calculated statistics to identify whether the incoming data item is an anomalous data item that is misclassified (as supported at P 7, L 10-21) and has not properly been added to the preexisting collection despite satisfying the at least one first rule (as supported at P 10, L 16-17), flagging the incoming data item as an anomalous data item if the data item is identified as an anomalous data item (as supported at P 8, L 6-8), and indicating to at least one user, based on the retrieved user preference profile, that the preexisting collection contains at least one data item that has been identified as anomalous with regard to other data items in the preexisting collection (as supported at P 13, L 9-11), as specified in claims 1, 10, and 19.

Regarding 35 USC 101, the examiner takes the position that the applicant's claimed

invention produces a concrete, useful, and tangible result in the final result of "indicating to at least one user".

The examiner has found that Agrawal et al. (USPN 6,094,651, referred to as Agrawal) in combination with Yost et al. (USPN 6,567,796, referred to as Yost) is the closest related prior art of record teaching (or suggesting) an invention that discovers anomalies in data using rules and a user profile. However, the examiner has found that the patentably distinct feature of the applicant's claimed invention over the prior art is the applicant's claimed use of a "preexisting collection", where the "preexisting collection" is patentably distinct from the "database" used by the prior art. The examiner has found that based on the applicant's disclosure (P 8, L 3-6), that the "preexisting collection" is a rule limited collection of information and that while a database would have been known to be a collection of information, a database is not inherently rule limited in the information that it contains.
